

SEO / GEO / AEO AUDIT REPORT

exdevx.in

ExDev Agency — Web Development & AI Solutions

May 11, 2026
Full Audit — All Dimensions

Executive Summary

exdevx.in is a newly-launched agency portfolio with a clean modern design and clear service positioning. However, the site faces a critical foundational blocker: it does not appear in any Google search index, meaning zero organic search discovery is occurring. The site is built as a JavaScript-rendered SPA (likely Next.js), which, without proper SSR/SSG or prerendering, is invisible to most search crawlers. Across SEO, GEO, and AEO dimensions, the site lacks schema markup, E-E-A-T signals, crawlable content, and any answer-engine-optimized structure. The single highest-leverage action is ensuring the site generates server-side rendered HTML and submitting a sitemap to Google Search Console immediately.

Dimension	Score	Status	Key Takeaway
SEO	2/10	Critical	Not indexed, likely JS-only rendered, missing all on-page fundamentals
GEO	2/10	Critical	No E-E-A-T signals, no schema, no entity clarity for AI engines to cite
AEO	1/10	Critical	No FAQ schema, no structured answer content, zero snippet eligibility
Combined	5/30	Needs Immediate Work	All three dimensions need foundational fixes before any content strategy applies

Pages Audited

The following pages were fetched and analyzed during this audit. Note: The site uses JavaScript-based rendering (SPA architecture); the HTML fetcher returned only meta tags — no body content — confirming crawlability issues.

URL	Page Type	Notes
https://exdevx.in/	Homepage	Meta tags only returned — body content not crawlable via standard HTML fetch; JS-rendered SPA confirmed
https://exdevx.in/robots.txt	Robots	Inaccessible — returned PERMISSIONS_ERROR, could not verify crawl directives
https://exdevx.in/sitemap.xml	Sitemap	Inaccessible — no sitemap verified; critical for index submission
Google Search: site:exdevx.in	Index Check	ZERO results — site has no pages indexed in Google as of audit date
Google Search: "exdevx.in"	Brand SERP	No brand visibility — site does not appear for its own domain name in search results

SEO Analysis — Score: 2/10

Traditional search engine optimization covers technical on-page signals, content quality, and structured data. exdevx.in fails at the most foundational level: the site is not indexed by Google, meaning no SEO optimizations applied at the content level will have any effect until crawlability is resolved.

Technical On-Page

Signal	Finding	Status
Google Indexation	site:exdevx.in returns zero results. The site is completely absent from Google's index. This is the single most critical SEO issue.	Critical
JS Rendering / Crawlability	Site is a JS-only SPA (likely Next.js CSR mode). HTML fetch returned only meta tags — no body content. Googlebot may be crawling an empty shell. Server-side rendering (SSR) or static generation (SSG) must be enabled.	Critical
Title Tag	"ExDevX Creative Solutions Web Development App Development" — 63 characters (slightly over the ~60 char optimal). Keyword "Web Development" present. Could be more specific with a geo-keyword (e.g., "India" or "Pune").	Needs Attention
Meta Description	"ExDevX - Modern Web Development, AI Solutions, Mobile Apps, SaaS Platforms, and Digital Innovation." — 100 characters. Present and on-topic but shorter than the 150-160 char optimal. Missing a clear CTA or differentiator.	Needs Attention
Heading Hierarchy (H1/H2)	Cannot assess — body content not rendered in the crawl. H1 presence and heading structure are unverifiable from the server response.	Needs Attention
Canonical Tag	Not confirmed present in the returned markup. SPA architecture without canonical tags risks crawl budget issues and duplicate indexation.	Missing
robots.txt	robots.txt returned an access error during the audit fetch. Cannot confirm crawl directives are correctly configured. A misconfigured robots.txt can block all indexing.	Missing
Sitemap.xml	No sitemap.xml accessible. Without a submitted sitemap, Google has no roadmap of the site's pages. Essential for a new domain to get indexed.	Missing
Viewport / Mobile Meta	"width=device-width, initial-scale=1.0" — correctly set. Mobile-first rendering should work at the browser level.	Good
Theme Color Meta	"#0f172a" — present. Minor positive signal for PWA/mobile browser UI.	Good
Open Graph / Twitter Card	Cannot confirm from available markup. OG tags are essential for social sharing and some AI crawlers use them for entity identification.	Needs Attention
Image Alt Text	Cannot assess — page body not rendered in HTML fetch. Alt text compliance is unverifiable.	Needs Attention

URL Structure	Root domain is clean. Subpage structure unknown (no sitemap, no indexed pages to analyze).	Needs Attention
---------------	--	-----------------

Content Quality

Signal	Finding	Status
Word Count / Content Depth	Body content not extractable due to JS rendering. Typical agency SPA portfolios have minimal crawlable text — usually under 300 words in the rendered HTML shell. If the site relies on JS for all content, Google may see an empty page.	Critical
Keyword Signals	Title tag contains "Web Development" and "App Development". Meta description includes "AI Solutions", "Mobile Apps", "SaaS Platforms". Good breadth in meta, but without indexable body content these signals cannot be processed by crawlers.	Partial
Blog / Content Strategy	No blog or resource section discoverable. No content strategy signals. For an agency competing in India's web dev market, content publishing is a major differentiator.	Missing
Portfolio / Case Studies	ssnlc.in is a known live production project. Whether it's showcased on the site with detailed case study content (problem, approach, outcome) cannot be verified from the crawl. Case study pages are high-SEO-value assets.	Needs Attention
Freshness Signals	No visible publication dates or content update timestamps detectable from available markup.	Missing

Structured Data

Signal	Finding	Status
Schema Markup (JSON-LD)	No schema markup detected in the returned HTML. No Organization, LocalBusiness, WebSite, Service, or any other schema type present.	Missing
Organization Schema	Missing. An Organization schema block declaring ExDev's name, URL, logo, social profiles, and contact info would establish the brand entity in Google's knowledge graph.	Missing
Service Schema	Missing. Each service offering (web dev, AI integration, mobile apps) should have a Service schema block with description, provider, and areaServed.	Missing

GEO Analysis — Score: 2/10

Generative Engine Optimization (GEO) covers signals that determine whether AI-powered search engines like Perplexity, ChatGPT Search, and Google AI Overviews will discover, trust, and cite this site. These engines require clear entity signals, factual authority, and structured content they can synthesize.

E-E-A-T Assessment

Signal	Finding	Status
Named Founder / Author	No named founder or team member visible in the crawlable markup. "Abhay Jadhav" and ExDev's founding story are powerful credibility signals that should appear in crawlable text, not buried in JS-rendered content.	Missing
About Page	Existence cannot be confirmed from the crawl. An About page with a founding story, founder credentials (UCER student, live production deployment at ssnlc.in), and agency background is critical for E-E-A-T.	Needs Attention
Contact Information	No phone, email, or address visible in the crawlable HTML. AI engines use contact information as a trust signal. developerabhi596@gmail.com should appear in crawlable text.	Missing
Client Testimonials	No testimonials visible in crawlable markup. Social proof is a key E-E-A-T differentiator for agencies.	Missing
Portfolio / Work Evidence	ssnlc.in is a verifiable live production deployment — a strong credibility anchor. This should be prominently mentioned in crawlable text with a detailed case study (problem, solution, tech stack, outcome).	Partial

Content for AI Synthesis

Signal	Finding	Status
Factual Density	No crawlable factual content detected. AI engines need specific facts: technologies used, project outcomes, years in operation, team size, client industries served. None of this is in the indexed HTML.	Missing
Clear Value Proposition	Meta description states services clearly ("Modern Web Development, AI Solutions, Mobile Apps...") but this doesn't appear in crawlable body content that AI engines can synthesize.	Partial
Entity Clarity	"ExDevX" appears in the title tag. But the brand is inconsistent — "ExDev Agency" vs "ExDevX" — which confuses AI entity graphs. Pick one canonical brand name and use it consistently everywhere.	Needs Attention
Originality / Unique POV	No original content, data, or published perspective visible. AI engines prefer to cite	Missing

	sources with a unique viewpoint (blog posts, case study findings, original research).	
--	---	--

Technical GEO

Signal	Finding	Status
HTTPS / Security	Site is served over HTTPS — confirmed. Positive trust signal for both traditional and AI crawlers.	Good
Social Profile Links	No verified social profile links (GitHub, LinkedIn) in crawlable markup. These sameAs links are essential for AI engines to connect the brand entity to external authority signals. github.com/AbhiDevepl should be linked.	Missing
Clean Crawlability for AI Bots	JS-only rendering is a critical blocker. Perplexity, ChatGPT Search, and Google's AI Overview crawlers have varying JS execution capabilities. Without SSR, the site is effectively invisible to most of them.	Critical
Rich Schema (Author, Dataset)	No rich schema types detected. Author schema, ProfessionalService schema, and WebPage schema would significantly improve AI engine entity recognition.	Missing

AEO Analysis — Score: 1/10

Answer Engine Optimization (AEO) covers signals that determine eligibility for featured snippets, People Also Ask boxes, and voice search results. These require direct-answer content structure, FAQ schema, and question-phrased headings — none of which are verifiable from the current crawlable state of the site.

Featured Snippet Eligibility

Signal	Finding	Status
Direct Answer Paragraphs	No structured Q&A content detectable. Site appears to be a visual portfolio with no text blocks structured for answer extraction.	Missing
Definition Patterns	No "ExDevX is..." or "We are a..." definition sentences in crawlable HTML. Google's featured snippet algorithm needs these anchor sentences.	Missing
List / Step Content	No numbered process steps or bulleted service lists in crawlable markup. These are prime featured snippet targets for "how to" queries.	Missing
Comparison Tables	No comparison content visible. Service comparison tables (e.g., "Web App vs Mobile App") are strong AEO content types.	Missing

Structured Answer Formats

Signal	Finding	Status
FAQ Schema	No FAQ schema markup detected. A dedicated FAQ section (What is ExDevX? What services do you offer? How long does a project take? What is your pricing?) with JSON-LD FAQPage schema would unlock People Also Ask eligibility.	Missing
HowTo Schema	No HowTo schema present. Process-oriented content ("How we build your web app in 5 steps") with HowTo markup is highly AEO-effective for service agencies.	Missing
Question-Phrased Headings	Cannot verify from crawl — but typical agency portfolios use visual/marketing headings ("We Build. We Ship. We Scale.") rather than question-format headings ("What does ExDevX build?").	Needs Attention

Voice Search Readiness

Signal	Finding	Status
Conversational Content	No conversational, long-tail query content visible. Voice search queries are typically questions ("Who is the best web development agency in Pune?") and need natural-language answers on the page.	Missing

Local Intent Signals	Shrigonda/Maharashtra/India location signals not present in crawlable content. Local voice queries ("web developer near me") require NAP data and a Google Business Profile.	Missing
SpeakableSpecification Schema	Not present. This advanced schema type marks specific content blocks as suitable for text-to-speech synthesis (used by Google Assistant and similar engines).	Missing

Priority Recommendations

Priority	Issue	Dimension	Effort	Impact
CRITICAL	Enable SSR or SSG — site body content is not visible to crawlers	SEO / GEO / AEO	Medium	Unlocks all other optimizations. Without this, nothing else matters — Google sees an empty page.
CRITICAL	Submit sitemap.xml to Google Search Console and request indexation	SEO	Low	Without this, Google has no discovery path. Fixes the zero-indexation problem immediately once SSR is live.
CRITICAL	Verify and fix robots.txt — confirm it's not blocking all crawlers	SEO	Low	A single "Disallow: /" line in robots.txt explains the complete lack of indexation. Must rule this out first.
HIGH	Add Organization schema with name, URL, logo, sameAs links (GitHub, LinkedIn)	GEO / AEO	Low	Establishes ExDev as a known entity in Google's knowledge graph. Required for AI engines to cite the site.
HIGH	Unify brand name: "ExDevX" vs "ExDev Agency" — pick one canonical name	GEO	Low	Brand name inconsistency confuses AI entity graphs and dilutes brand SERP authority.
HIGH	Add crawlable About page with founder name, credentials, and agency story	GEO	Medium	E-E-A-T is the #1 GEO signal. Founder story + live deployment proof (ssnlc.in) is genuinely strong material.
HIGH	Add an FAQ section with FAQ schema targeting key prospect questions	AEO	Low	Directly unlocks People Also Ask eligibility and voice search for high-intent queries like "web development agency India".
MEDIUM	Extend meta description to 150-160 chars with a specific CTA	SEO	Low	Increases SERP click-through rate once the site is indexed. Current 100-char description leaves opportunity on the table.
MEDIUM	Create a ssnlc.in case study page with problem, tech stack, outcome, and live link	SEO / GEO	Medium	Live production work is rare for an agency at this stage. A detailed case study is a credibility and keyword magnet.
MEDIUM	Add Service schema for each core offering (Web Dev, AI Integration, Mobile)	SEO / GEO	Low	Helps search engines and AI synthesizers understand service scope. Links to areaServed: India for local relevance.
QUICK WIN	Add contact email and GitHub link in crawlable HTML (not JS-only)	GEO	Minimal	Immediate trust signal for AI crawlers. Takes 10 minutes — add to footer in static HTML.
QUICK WIN	Register Google Business Profile for ExDev (Shrigonda, Maharashtra)	AEO / GEO	Minimal	Free Google product. Immediately appears for local searches and maps. Provides NAP signals that improve local SEO and voice search.
QUICK WIN	Shorten title tag to under 60 chars and add location keyword ("India" or "Pune")	SEO	Minimal	Current 63-char title gets truncated in SERPs. Adding "India" targets the local web dev agency market.

What's Working Well

Strength	Evidence & Notes
HTTPS Secure	Site is served over HTTPS — correct protocol, accepted by all search engines and AI crawlers as a baseline trust signal.
Mobile Viewport	"width=device-width, initial-scale=1.0" is correctly set — mobile rendering at the browser level will work.
Service Breadth in Meta	The meta description covers multiple high-value service keywords: "Web Development, AI Solutions, Mobile Apps, SaaS Platforms" — good keyword breadth in a single sentence.
Live Production Portfolio	ssnlc.in is a live, production-deployed Next.js + Express.js + MongoDB platform for a real institution. This is a genuine credibility differentiator that most student-founded agencies cannot claim. Feature it aggressively in crawlable content.
Modern Tech Stack Signals	"AI Solutions" in the meta description positions ExDevX in the current market trend toward AI-integrated web development — a high-demand, low-supply positioning among Indian agencies.
Clean Domain	exdevx.in is a clean, memorable .in domain with no legacy SEO baggage, spam history, or toxic backlinks. Starting fresh is an advantage when paired with correct technical setup.

Glossary

Term	Definition
SEO	Search Engine Optimization — the practice of improving a website's visibility in traditional search engine results (Google, Bing). Covers technical health, on-page content, and backlinks.
GEO	Generative Engine Optimization — optimizing content to be discovered and cited by AI-powered search systems (Perplexity, ChatGPT Search, Google AI Overviews). Prioritizes factual density, entity clarity, and E-E-A-T signals.
AEO	Answer Engine Optimization — structuring content to win featured snippets, People Also Ask boxes, and voice search results. Requires direct-answer paragraphs, FAQ schema, and question-phrased headings.
E-E-A-T	Experience, Expertise, Authoritativeness, Trustworthiness — Google's framework for evaluating content quality and source credibility. Central to both SEO and GEO ranking signals.
Schema / JSON-LD	Structured data markup embedded in a page's HTML that tells search engines and AI crawlers exactly what a piece of content represents (an organization, a service, a FAQ answer, etc.).
SSR / SSG	Server-Side Rendering / Static Site Generation — Next.js features that pre-render HTML on the server, making page content immediately available to crawlers without needing JavaScript execution.
SPA	Single Page Application — a JS-heavy site architecture where page content is rendered in the browser after JavaScript executes. Without SSR/SSG, content is invisible to most search crawlers.
