

SEO / GEO / AEO

AUDIT REPORT

exdevx.in

Full Audit

May 12, 2026

Claude Skill and Plugin by Alex Labat

Executive Summary

exdevx.in is a JavaScript SPA (Single Page Application) with no server-side rendering, which creates a fundamental and severe visibility problem across all three audit dimensions. The site has zero confirmed Google index presence — it does not appear in any search results for its domain. While the homepage meta tags are well-intentioned, every piece of actual content (headings, services, copy, portfolio, contact info) is rendered via JavaScript and is effectively invisible to most search crawlers and all AI-powered search engines. The most urgent action is migrating to SSR (Next.js or similar) or implementing prerendering — without this fix, no other SEO, GEO, or AEO improvement will have meaningful impact. Once crawlability is resolved, several quick wins (schema markup, Open Graph tags, About/Team page) can rapidly improve AI search visibility.

Dimension	Score	Status	Key Takeaway
SEO	2/10	Critical	JS-only SPA — zero crawlable content, zero index presence
GEO	1/10	Critical	Invisible to AI search engines; no E-E-A-T signals whatsoever
AEO	1/10	Critical	No schema, no FAQ, no crawlable answers — zero AEO signals
Combined	4/30		Foundational JS rendering fix required before all else

Pages Audited

Note: Only the homepage could be fetched. robots.txt and sitemap.xml were inaccessible. The site uses JavaScript rendering, which prevented crawling of subpages. All inner page URLs returned access errors.

URL	Page Type	Notes
https://exdevx.in/	Homepage	Only <head> tags returned — JS SPA, no body content in static HTML
https://exdevx.in/robots.txt	Robots	Inaccessible (403 / blocked)
https://exdevx.in/sitemap.xml	Sitemap	Inaccessible (403 / blocked)
site:exdevx.in (Google)	Index Check	ZERO results — site not indexed in Google

SEO Analysis — Score: 2/10

The site's critical SEO issue is architectural: it is a JavaScript-only Single Page Application with no server-side rendering. Google Search Console shows zero indexed pages. While Googlebot can execute JavaScript, it does so inconsistently and on a crawl budget delay. Combined with inaccessible robots.txt and no sitemap, the site is practically invisible to organic search.

Technical On-Page

Signal	Finding	Status
Title Tag	Present: "ExDevX Creative Solutions Web Development App Development" — 69 chars (too long, optimal 50-60). Keyword present but truncated in SERPs.	Needs Attention
Meta Description	Present: "ExDevX - Modern Web Development, AI Solutions, Mobile Apps, SaaS Platforms, and Digital Innovation." — 111 chars (too short, optimal 150-160). No CTA.	Needs Attention
H1 Tag	NOT FOUND in fetched HTML. Site is JavaScript-rendered (SPA) — HTML shell contains only <head> tags. H1 exists only after JS executes, invisible to crawlers without JS rendering.	Missing
Heading Hierarchy (H2/H3)	Cannot confirm — SPA renders headings via JS. Google can index JS-rendered content but inconsistently. No static heading structure detected in source.	Needs Attention
URL Structure	Root domain clean. Subpages could not be crawled — likely hash-based routing (#/services, #/about) or JS-only navigation, which is poor for SEO.	Needs Attention
Canonical Tag	Not detected in static HTML. SPA may inject via JS — unverifiable without JS rendering. Risk of duplicate content issues.	Missing
Robots Meta	Not found in static HTML. Default behavior is indexable but absence is a risk if JS injects noindex.	Needs Attention
Viewport/Mobile Meta	Present: width=device-width, initial-scale=1.0 — correct.	Good
Image Alt Text	Cannot confirm — all content JS-rendered. High risk that images lack alt text in SPA implementations.	Needs Attention
Open Graph / Social Tags	og:title, og:description, og:image NOT found in static HTML. Social sharing will show blank previews when links are shared on LinkedIn, WhatsApp, etc.	Missing
Twitter Card	Absent from static HTML. Twitter/X shares will have no card preview.	Missing

Content Quality

Signal	Finding	Status
Word Count / Content Depth	Zero indexable text in static HTML. All content hidden behind JS execution. Googlebot may or may not render it — inconsistent indexing guaranteed.	Missing
Keyword Strategy	Services mentioned in title/meta (Web Dev, AI, Mobile, SaaS) but zero body content in crawlable form. No semantic keyword clustering observable.	Needs Attention
Content Freshness Signals	No publication dates, blog posts, or update signals detected. Static SPA with no visible freshness indicators.	Missing
Readability / Scannability	Cannot assess — JS-rendered. SPA content not available to search crawlers without prerendering/SSR.	Needs Attention

Structured Data

Signal	Finding	Status
Schema Markup	NONE detected in static HTML. No JSON-LD, no microdata. Organization schema, LocalBusiness, WebSite schema all absent.	Missing
Schema Validity	N/A — no schema found.	Missing

GEO Analysis — Score: 1/10

GEO (Generative Engine Optimization) covers visibility in AI-powered search engines: Google AI Overviews, Perplexity, ChatGPT Search, Gemini. These engines synthesize answers by crawling and citing authoritative pages. exdevx.in is currently invisible to all of them — the JS rendering barrier means AI crawlers find empty HTML, and there are zero E-E-A-T signals, no brand entity schema, no factual content, and no social proof that AI engines could cite or use to establish trust.

E-E-A-T Assessment

Signal	Finding	Status
Named Authors / Team	No team members, founders, or authors named anywhere in crawlable content. Zero E-E-A-T signals for AI engines.	Missing
About Page	Cannot confirm existence — SPA. No static /about page accessible. If exists, content not crawlable without SSR.	Missing
Contact Information	Phone, address, email not found in static HTML. No NAP (Name/Address/Phone) data present.	Missing
Testimonials / Trust Signals	No reviews, awards, certifications, or press mentions found in any indexable form.	Missing
Organization Schema	Absent. Brand entity (name, logo, URL, social profiles) not declared to AI search engines via structured data.	Missing

Content for AI Synthesis

Signal	Finding	Status
Factual Density	Zero indexable facts, statistics, or data points. AI engines (Perplexity, ChatGPT Search) have nothing to cite.	Missing
Clear Value Proposition	Meta description mentions services but zero above-the-fold crawlable content. AI engines cannot summarize what this company does from source HTML.	Missing
Source Citations / References	None found. No external authority signals.	Missing
Content Comprehensiveness	Cannot assess — JS wall blocks all content. Competitor sites with SSR/static pages will consistently outrank for AI-cited results.	Missing
Entity Clarity	Brand name "ExDevX" appears in title tag only. No entity disambiguation — no location, no founder, no founding year, no LinkedIn/social links in static HTML.	Needs Attention
Original Data / POV	None detectable. No case studies, no statistics, no original research visible to crawlers.	Missing

Technical GEO

Signal	Finding	Status
HTTPS / Security	HTTPS confirmed. Good baseline trust signal.	Good
Crawlability (JS Rendering)	CRITICAL ISSUE: Entire site is a JavaScript SPA with no server-side rendering. AI crawlers (Perplexity, ChatGPT Search, Bing) have limited JS execution capability. Site is effectively invisible to most AI search engines.	Missing
Social / sameAs Links	No social profile links (LinkedIn, Twitter, GitHub) found in static HTML. Entity graph cannot be established.	Missing

AEO Analysis — Score: 1/10

AEO (Answer Engine Optimization) targets featured snippets, People Also Ask boxes, and voice search. These surfaces require concise, structured, crawlable content — definitions, step-by-step guides, Q&A formats, and relevant schema markup. exdevx.in has none of these. Without SSR and content strategy, it cannot compete for any answer engine placement.

Featured Snippet Eligibility

Signal	Finding	Status
Direct Answer Paragraphs	None — no crawlable body text exists. Cannot qualify for any featured snippet.	Missing
Definition Patterns	No "ExDevX is..." or similar definitional sentences in crawlable content.	Missing
List Content (Steps/Bullets)	Cannot confirm — JS-rendered. No static list markup.	Missing
Table Content	None detected.	Missing

Structured Answer Formats

Signal	Finding	Status
FAQ Schema	Absent. No FAQ markup. Cannot appear in FAQ-rich results or People Also Ask.	Missing
HowTo Schema	Absent.	Missing
Question-Phrased Headings	Cannot confirm — JS-rendered. No static question headings.	Missing

Voice Search Readiness

Signal	Finding	Status
Conversational Query Coverage	Zero — no indexable content to match voice queries.	Missing
Local SEO Signals	No NAP, no Google Business Profile signals, no LocalBusiness schema. Cannot appear in "near me" or local voice searches.	Missing
Speakable Schema	Absent.	Missing

Priority Recommendations

Priority	Issue	Dimension	Effort	Impact
Critical	Implement SSR or Static Site Generation (Next.js/Nuxt)	SEO + GEO + AEO	High	Critical — fixes all crawling issues at once
Critical	Site has zero Google index presence — submit sitemap, verify GSC	SEO	Low	Immediate visibility recovery
Critical	Add Organization + WebSite JSON-LD schema to <head>	GEO + AEO	Low	Establishes brand entity for AI engines
High	Fix title tag length (currently 69 chars, trim to 50-60)	SEO	Low	Prevents SERP truncation
High	Expand meta description to 150-160 chars with strong CTA	SEO	Low	Improves click-through rate
High	Add Open Graph + Twitter Card meta tags to <head>	SEO	Low	Social shares show blank previews currently
High	Add Contact page with NAP + embed Google Maps	GEO + AEO	Low	Local search + E-E-A-T signals
High	Create About/Team page with founder bios and credentials	GEO	Medium	Critical for E-E-A-T and AI engine trust
Medium	Add FAQ section with FAQ schema markup	AEO	Medium	Enables People Also Ask + voice search
Medium	Create crawlable case studies / portfolio pages	GEO + SEO	High	Factual density for AI citation + backlinks
Medium	Add blog / resources section with 1500+ word pillar content	SEO + AEO	High	Long-tail keyword coverage + freshness signals
Quick Win	Add canonical tag to homepage <head>	SEO	Low	Prevents duplicate content penalty
Quick Win	Link all social profiles (LinkedIn, GitHub, Twitter) from footer	GEO	Low	Builds entity graph for AI search engines

What's Working Well

Strength	Evidence
HTTPS Enabled	Site runs on HTTPS — baseline security and trust signal confirmed.
Relevant Title & Meta	Title and meta description correctly identify the business category (web dev, AI, mobile apps, SaaS). Keyword intent is aligned.
Mobile Viewport	Viewport meta tag correctly configured for responsive design.
Clean Domain	.in TLD appropriate for Indian market. Domain name "exdevx.in" is distinctive and brandable.
Broad Service Positioning	Meta description covers multiple high-demand service categories (Web Dev, AI Solutions, Mobile Apps, SaaS) — good topical breadth for keyword targeting once content is crawlable.

Glossary

SEO (Search Engine Optimization)

The practice of improving a website so it ranks higher in traditional search engines like Google and Bing. Covers technical factors (page speed, crawlability, structured data), on-page factors (titles, headings, content quality), and off-page factors (backlinks, brand mentions).

GEO (Generative Engine Optimization)

An emerging discipline focused on visibility within AI-powered search engines such as Google AI Overviews, Perplexity, ChatGPT Search, and Gemini. These engines synthesize answers from multiple sources and cite the pages they draw from. GEO prioritizes E-E-A-T signals, factual density, entity clarity, and content that AI models can confidently attribute.

AEO (Answer Engine Optimization)

Optimization for featured snippets, People Also Ask boxes, and voice search — surfaces where search engines extract and display direct answers. AEO requires concise, structured content, question-phrased headings, FAQ schema, and content written in natural conversational language.

E-E-A-T

Experience, Expertise, Authoritativeness, Trustworthiness — Google's quality evaluation framework for assessing content credibility. Includes named authors with credentials, About pages, contact info, reviews, and citations from authoritative sources.

SSR (Server-Side Rendering)

A web development technique where HTML is generated on the server and sent to the browser pre-rendered. Critical for SEO because search crawlers receive full content immediately, without waiting for JavaScript to execute. Next.js and Nuxt are popular SSR frameworks.

Schema Markup / JSON-LD

Structured data embedded in a webpage's HTML that tells search engines exactly what the page is about — organization name, address, products, reviews, FAQs. Enables rich results in SERPs and helps AI engines identify entities.
